SUMMARY

Full-stack engineer with 2+ years in healthcare and insurtech, experienced across React/Next.js frontends, Express/Node backends, and third-party API integrations. Track record of owning features end-to-end, catching integration issues before production, and building scalable systems in fast-paced environments.

SKILLS

- **Languages:** JavaScript, TypeScript, C#, SQL, HTML, CSS, PHP
- **Frameworks/Libraries:** React, Next.js, Node.js, Express.js, Prisma, React Native, Angular, WordPress
- **Tools/Platforms:** Git, PostgreSQL, Docker, AWS, Linux, VS Code, Figma
- **Competencies:** REST APIs, GraphQL, Mobile-First Design, UX/UI Principles, Responsive Design, Jest, Agile, Debugging

EXPERIENCE

LabFinder

Software Engineer

September 2025 - February 2026

- Developed and maintained features across a healthcare scheduling platform using **Angular**, **React Native**, **PHP**, and legacy **WordPress** systems in a fast-paced startup environment
- Designed **responsive landing page** layouts in **Figma** and implemented them in **WordPress/PHP**, improving cross-browser compatibility and supporting marketing-driven user acquisition efforts
- Integrated **AWS Cognito** authentication flows for a React Native **iOS** application, including user pool configuration and authentication-related frontend logic
- Identified a critical **Cognito** misconfiguration where client secret **authentication** was enabled for a mobile app, creating decompilation risk; flagged it to leadership before production release
- Engineered **AWS**-backed services, including **Lambda**-based workflows, to support authentication and backend functionality for application development
- Diagnosed and resolved a skeleton loader rendering twice on initial load, reducing page load time by **30%**

Affinity Marketplace

Software Developer

March 2024 - November 2024

- Rebuilt the insurance portal's responsive layout by restructuring **Flexbox architecture** and converting fixed PX units to scalable REM units, improving usability across mobile devices
- Designed and implemented a full quote submission flow with custom **React** components, dynamic pages, form interactions, and stateful user feedback
- Integrated third-party cyber insurance carrier **APIs**, including Coalition and Cowbell, using **Express.js**, **TypeScript**, **Prisma**, and **SQL**-backed mock payloads
- Improved frontend performance by reducing page load times by **20%** and resolving **40+ bugs** through **QA testing**, **debugging**, and **UI optimization**
- Built dynamic **Next.js** pages and frontend flows to collect user inputs, submit quote data, and display carrier responses
- Participated in **sprint planning**, **stand-ups**, **peer code reviews**, and technical discussions within an **Agile development** workflow

Code Ninjas, Douglasville, GA

Lead Instructor

January 2022 - February 2023

- Taught **JavaScript** and **C#** fundamentals to 25+ students through interactive coding challenges, game development, and project-based learning
- Acted as on-site lead when the Center Director was unavailable, coordinating daily operations, student support, and parent communication
- Led technical walkthroughs and program tours for prospective families, contributing to successful parent sign-ups and student enrollment

PROJECTS

Portfolio Version 2 | Next.js, TypeScript, React, Tailwind CSS, Vercel | [GitHub](#)

- Migrated a legacy portfolio application to **Next.js** and **TypeScript**, improving maintainability, routing structure, and scalability
- Refactored outdated components into reusable **UI** patterns while improving **responsiveness** and reducing technical debt
- Leveraged **Next.js** file-based routing and dynamic routes to organize project pages and improve navigation

Kanri-Mono | Node.js, Express, PostgreSQL, Sequelize, Bcrypt, Nodemailer | [GitHub](#)

- Owned backend development for a full-stack Tamagotchi-inspired game, including **RESTful API** routes, **database models**, and **bcrypt-encrypted auth** covering registration, login, password reset, and account deletion
- Implemented game-state logic persisted to the database for user actions including feeding, bathing, healing, and saving progress; integrated **Nodemailer** for **registration** emails and a real-time weather **API**
- Collaborated with 3 frontend developers to connect API routes and database models to interactive React gameplay features

Health & Fitness App | HTML, CSS, JavaScript, Bootstrap, REST APIs | [GitHub](#)

- Integrated **API** Ninjas recipe and exercise endpoints to return dynamic results based on user input, with reusable card layouts and responsive **UI** components
- Collaborated on a 4-person team using **Git workflows**, resolving merge conflicts and contributing **documentation** updates

CERTIFICATIONS

DigitalCrafts, Atlanta, GA

Certificate of Completion in Software Development

November 2023

EDUCATION

University of West Georgia, Carrollton, GA - Computer Science

2018 – 2021
